Abstract

The study on Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province had the objectives to study on Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province and to compare Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province according to gender, age, year of study, and to propose comments about the guidelines of Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province. The sampling of the research are students studying in secondary level from grade 13-18 from Phungdatvittayakan School, Muang District, Mukdahan province. The total population were 900 people with 269 sampling chosen by using Stratified Random Sampling Method in according with the instant sample size schedule of Krejcie & Morgan, and divided according to the proportion of students in each year. The statistics used in this study are to find frequency, percentage, mean, and standard deviation, t-test, and One-Way Analysis of Variance : F-test by using statistical analysis software packages. The result of the research could be concluded as follow:

The results were as follows

1. The data analysis result about Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province was found in overall image of Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province that it was in high level. When considering in each side, it was also found that all 8 sides were in high level as well such as honesty, discipline, cleanliness, unity, politeness, kindness, and diligence, respectively.

2. The data analysis result about Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province divided according to gender and age by using t-test was found in overall image that they were different without statistical significant at the level of 0.05. When considering in each side, it was found that they were different without statistical significant at the level of 0.05, so the hypothesis was rejected.

3. The data analysis result about the Promoting the basic moral and ethics of students in Phungdatvittayakan School, the Secondary Educational service area Office 22, Mukdahan province divided according to the year of study by using One-Way Analysis of Variance : ANOVA in overall image, it was found that they were different without statistical significant at the level of 0.05. When considering in each side, it was found that they were different without statistical significant at the level of 0.05, so the hypothesis was rejected.
