ABSTRACT

The global societies have been continuously changed. Material progress has been going very fast. Now, new generation of people are estranged from a temple and religious practice. This research aims at studying the youth's attitude toward the monks. The populations are the youth in the regional administration of The Sangha, region 10. The samples are 306 young students of the private institutes, in the level of the higher vocational certificate in Ubonratchathani Province, which is the stratified random sampling. The research methodology is rating scale of standard deviation, comparison of the attitude among the samples, T- test and analysis of single variance. The result of research is found that:

The 43.8 % youth are male. The 56.2 % of them are female. The 70.6 % them are mostly in 22-25 years of age. The 54.2 of them are studying in the second year. The 45.8 of them are studying in the first year. The 40.8 % of their guardians are agriculturalists. The 30.4 % of them are general employees. The 17.0 % of them have private business. The 11.8 % of them are government officials.

Totally, the youth have good attitude, feeling, opinion and conduct toward the monks. Their attitude is in the percentage of 3.81, 3.87 and 3.93 from total 5 scores respectively. The young people whose guardians are general employees

have better attitude, feeling, opinion and conduct toward the monks than the youth whose guardians have occupations of agriculture, private business government officials. Meanwhile, the youth who are different in sex, age and the year of studies totally have the same attitude of feeling, opinion and conduct toward the monks.
