ABSTRACT

The research is of the objectives to study and compare the students' satisfaction's with the environment in Nonsiwitthaya School, in the educational area office, Bangkok District 2, Where there are 280 students in the 4th – 6th Classes in the secondary school. Who are the exemplary groups in analyzing the data. The instruments in researching are the questionnaires which are the measurements are of about 5 levels. The analysation of the data is carried out by finding out the frequency, the percentage, the average, the standard deviation, the T- test and One-way Anova by fixing the important point at the statistic point of 0.05

From the research, it is found that

1. Most of the answerers of the questions are of the female sexes of 160 persons at the percentage of 57.1. And the male sexes of 120 persons at the percentage of 42.9. All of them are of the ages of 17 – 18. of the members of 172 persons. at the percentage of 61.4. And at 15 – 16.of the members of 108 persons at the percentage of 38.6. They are the students of the 5th. Secondary class are of themembers of 125 persons at the percentage of 44.6. The students of the 4th in the secondary class are of themembers of 102 persons at the percentage of 36.4. The students in the 6th secondary class are of the members of 53 at the percentage of 18.9. When it is separated side by sides. it is found that the students. Who are satisfied with the teaching the groups of friends, the administration and the location are, in general, at the more levels.

2. When the learners' satisfactions are compared with the environment in Nonsiwitthaya School, in the educational area office, Bangkok District 2, it is found that they are different without the important point in statistics at the level of 0.05. When it is compared side by side, it is found that the male students and the female student are of different satisfaction on the side of administration, but on the side of the building, the location, the groups of friends, the learning, and the teaching, the students are of the not-different satisfactions at the importer point of statistics of 0.05
