Abstract

The objective of this research were :1) to study the Public participation level on the performance of Tontong Sub-District Muang District Lamphun Province in helping the Police activities of provincial police station Muang Lamphun District Lamphun province, 2) to compare the public participation of Tontong Sub- District in helping the police by personal factors, 3) to study the problems obstacles with the participation of Tontong Sub- District Muang Lamphun District in helping the police 4) to study ways to promote the participation of the people of Tontong Sub-District in helping the police. Conduct research using mixed methods research (Mixed Methods) population used in this study were the people in Tontong Sub-District Muang Lamphun District, 387, and data were collected using a questionnaire. (Questionnaire) analyzed The data were analyzed by using the questionnaire package for social science research. To determine the frequency (Frequency), percentage (Percentage) Average (Mean) and standard deviation (Standard Deviation) and test hypotheses t test (t-Test) and test F (F-Test) as well. One-way analysis of variance (one - way ANOVA) was found to be different, so different test pairs. Using a least significant difference (Least Significant Difference: LSD) as part of an open-ended question that shows the problems. And suggestions The researchers grouped the issues set out in an open-ended questionnaire. Then it analyzes the frequency (Frequency) and data from interviews. The researcher grouped data (Data Grouping) The essence of the interview. Then analyzed the data content (Content Analysis Technique).

The results showed that

1. People in Tontong sub- district With comments on the Public participation of Tontong Sub- district opinions in helping the police in a high level (= 3.76) when it was found that the classification of contemplate to share the goals and interests. At a high level

2. Compare the Public participation of Tontong Sub- district Mounng Lamphun District, hypothesis testing, analysis of different classification based on personal factors, including gender, age, education, income and occupation that the total average for age and sex. No difference to deny the hypothesis. The variables of income, education and occupation in the average difference statistically significant at the 0.01 level, so that the hypothesis.

3. The problems , obstacles Of the public participation of Tontong Sub- district in helping the police found that the most common problem is that the participants in the present review was low. And not comment on the planning of the operation of the police. I feel that it is important to set the guidelines for the implementation of activities. Moreover, in some opinions do not get massacred by the police as they should. Police officials should encourage people to participate, offering comments and the comments that are beneficial to the operation of the police.

4. The qualitative study found that the participation of people with the help of the police, according to a new context civilizations. There is a great need to be implemented to achieve the participation of all. To fix the problem correctly match the needs of the people. The principles involved and 4 in order to ensure the implementation of more effective police.
